CUMULATIVE SUBJECT INDEX 1977-80

Coverage

The present index provides a subject key to all papers abstracted in *Physics Abstracts* for the years 1977–80. It therefore comprises all relevant entries included in the six monthly subject indexes for the same period.

Subject Headings

In the course of the four years covered by this index the list of subject headings has been revised and new headings have been added. The present index uses the latest (i.e. 1980) version of the list. Entries for articles abstracted in the 1977, 1978 and 1979 volumes have been examined and, where appropriate, re-indexed under the new headings.

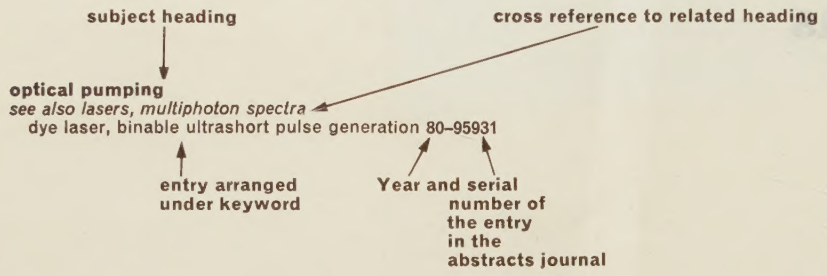
Arrangement

The subject headings are arranged in alphabetical order. The entries under each are prepared so that the most significant or 'key' words appear first and thus determine the position and grouping of entries in the alphabetical sequence under each heading.

Where the names of specific inorganic substances are significant under a given heading, the entries relating to them are found as a second alphabetical listing arranged by the chemical formulae of the particular elements or compounds.

Form of entry

The information contained in the subject index may be illustrated by an example.



subject heading
cross reference to related heading
optical pumping
see also lasers, multiphoton spectra
dye laser, binable ultrashort pulse generation 80–95931
entry arranged under keyword
Year and serial number of the entry in the abstracts journal

How to use the index

The Subject index provides an alphabetical subject key to the articles included in the abstracts journal. Some general guidance on its use is given below:

1. Look in the index for the name of the specific subject in which you are interested. In most cases this name will be a heading in the index and you will find relevant articles listed under it. The majority of the subject headings fall into the following categories: property, phenomena, substance or named objects, instrument, device, theory, method, process, application, event.
2. Occasionally you will be directed from the subject heading chosen to a different heading under which the relevant or additional articles are listed.
3. If you do not find the subject heading you first chose, try a more general heading.
4. Each entry under the heading relates to an article appearing in the abstracts journal and gives the serial number of that article in the journal preceded by the last two digits of the current year, e.g. 78–12345; i.e. Abstract number 12345 in the abstracts journal for 1978.

   The language of the article, if it is not in English, is also indicated, e.g. optical fibre, three-wave stimulated Raman scattering (French) 0–78902.

   Each entry starts with a Keyword or Keyphrase considered to be most relevant to the heading. On sorting these Keywords, the qualifying prefixes are usually ignored (e.g. n-Ge is sorted under Ge).

   There are three main keyword lists; arabic numerals, alphabetical A–Z, and chemical symbols (organic substances are written and not given as chemical formula). More than one Keyword list may be present under each subject heading.

   For document on, say 'photoemission of silicon' at least two access points 'photoemission' and 'elemental semiconductors' are provided. Under the heading 'photoemission' the Keyword will be 'Si' and under 'elemental semiconductors' the Keyword will also be 'Si'.

   In a case like this, it is advisable and quicker to use the heading 'photoemission' and go straight to the chemical symbol list for 'Si' because there are few entries listed under 'photoemission'.

Abbreviations and Acronyms

Abbreviations and acronyms are used in the modifiers in all INSPEC Cumulative Subject Indexes. Individual terms should be readily understood in the context of the subject headings. **Inorganic substances** are usually given by their chemical formulae. Iron and aluminium garnets appear in the formulae lists as MIG and MAG (where M is metal element, e.g. YIG and YAG); $(Pb,La)(Zr,Ti)O_3$ and $Ce_2Mg_3(NO_3)_{12}$ appear as PLZT and CMN respectively. **Organic substances** including **liquid crystals** are not given as formulae but common abbreviations are used.

artificial satellite geodesy and geophysics appls., review 77−64183
Mid-Atlantic Ridge, geophysical and petrological constraints 78−85508
avalanches and landslides, reach and velocity *(German)* 77−53095
axisymmetric inertial fluid oscillations in cylindrical cavity during spin-up from rest 78−5750
Benard convection, very viscous fluid, theory 80−10236
British Trias, hydrogeophysical props. 77−41074
CAI, interactive computing with graphic display 77−21
Carpathian system, geophysical data and Earth structure *(Hungarian)* 77−86829
combination of observations in the identification of geophysical objects 77−64173
conducting sphere, rot. in mag. field relativistic, co-rot. frame 79−53714
conf. of American Geophys. Union, Dec. 1979, San Francisco 80−81890
conference, April 1980, Birmingham, England 80−56474
conference, New Delhi, India (Jan. 1979) 80−94912
conference, Nov. 1979, New Orleans, USA 80−81891
correlation functions for geometric models of geophysical data *(Rumanian)* 79−58124
cosmology and geophysics, book 79−12552
Cretaceous-Tertiary extinctions, possible terrestrial and extra-terrestrial causes 78−31999
E.Crimea, geophysical data rel. to deep crustal struct. *(Russian)* 80−104933
data acquisition using Fourier series and Markov processes *(Italian)* 80−109254
data storage by metallic carrier electroerosion via liquid pulsed discharge *(Russian)* 78−61563
Deep Sea Drilling Project Leg 37-1974, conference Edmonton, Canada, (May, 9176) 77−91069
Dobrogea, Rumania, geophysics and geology *(Rumanian)* 78−20419
Earth and planetary sciences, annual review (volume 7) 79−84070
Earth observation programme of ESA 80−109250
Earth-oriented research programme of ESA 80−109251
education, applied science CNAA degree course at Kingston Polytechnic 79−35454
educational course, for physics students 77−67155
Einstein's work in solid-state theory, geophysical importance *(German)* 79−86848
elastodynamics, numerical boundary integral eqn. method 79−63036
environment evolution, available elements during Earth history rel. to life evolution 79−80030
epithermal neutron fields in nuclear geophysics *(Russian)* 80−85658
Europe, tectonic and geophysical implications of preliminary heat flow map 79−70765
field configurations, analytical description in terms of differential geometry *(Russian)* 79−74986
fluid dynamical systems, statistical anal. and prediction 78−11901
fluid dynamics, boundary conditions imposed by stratified fluid 79−55404
fluid dynamics, mathematical theory, book 80−105443
fluid dynamics, specialist symposium, (Munich, 6 to 9 September 1977) 79−57951
fluid dynamics, use of similarity theory in Soviet work *(Russian)* 78−16174
fluid layer with rot. and mag. field, cell sizes at thermal convection onset 77−54991
folds, non-Newtonian 79−88349
geodetic meas. methods and geophysical appl. 79−66835
geodetic observatory at Graz-Lustbuhel, Austria, work and projects 80−77117
Geos satellite, first six months' obs. 78−61705
geothermometry and geobarometry, conf., University Park, Pennsylvania (October 1975) 77−2123
global problems of fluid dynamics 78−96173
gravitation and inertia corpuscular model, geophysical consequences *(Russian)* 79−40439
gravity corpuscular model, geological and geophysical consequences *(Russian)* 77−67367
Griffith crack-antiplane shear wave interaction at interface of two bonded elastic half-spaces, geophys., seismological appl. 80−92087
hydrogeological problems, geologic concept in geophysical research 77−9451

geophysics continued
hydrology, method of characts. with fixed net for slowly varying nonstationary flows *(German)* 79−5515
inflection surfaces, use in descriptions of folds 79−88324
International Magnetospheric Study, Satellite Situation Center 77−53197
inverse problem, non-linearity effects 79−8704
inverse problems, potential theory for interpretation 78−7557
S.Irish Caledonides, plate tectonics and evolution 77−5174
Japanese Islands region, geophysical data compilation *(Japanese)* 80−67332
Lomonosov Ridge Experiment (Lorex 79) in Arctic Ocean 80−77120
magma double-diffusive crystallization rel. to igneous layered rocks 80−90081
magnetothermoleastic waves, propag. in initially stressed conducting layer 79−63
marine geology and geophysics, 1967-77 review 77−64260
mathematical geophysics, 11th International Symposium (Seeheim, Germany, 18-27 August 1976) 77−73622
metamorphism, rate laws 79−16467
meteorite craters, geophysical and geomechanical aspects 80−17265
MHD, monograph 78−40816
MHD induction, simplest physical model of generator 78−71548
mineralized zones, probability and uncertain number theory appls. *(Rumanian)* 77−29509
NASA Earth and ocean dynamics programme 77−56733
natural resource digital image anal. development in USA 78−96327
natural slopes, failure surfaces propag. 79−39719
